Data Analyst · BI Developer · MIS Executive

PROFESSIONAL SUMMARY

Aspiring Data Analyst with hands-on experience delivering 3 end-to-end analytics projects — from a ₹137M+ Power BI finance dashboard to a PostgreSQL e-commerce pipeline and an Excel salary intelligence tool. Skilled in translating raw data into business decisions using DAX, Power Query, SQL window functions, and Python EDA. Currently pursuing BCA in AI & Data Science; targeting Junior Data Analyst, BI Developer, and MIS roles where analytical depth creates measurable impact.

TECHNICAL SKILLS

Power BI: ETL, DAX, Power Query, Power BI Service, Data Modelling, Data Cleaning, Data Visualization, Report Optimization

SQL: Query Optimization, Joins, Subqueries, Window Functions, CTEs, Indexing, Stored Procedures, MySQL, PostgreSQL

Microsoft Excel: Pivot Table, XLOOKUP, FILTER, SORT, Dynamic Arrays, Power Pivot, Conditional Formatting, Data Validation

Python: Pandas, NumPy, Matplotlib, Seaborn, Data Wrangling, EDA

Tools: Power BI Desktop, PostgreSQL, MySQL, VS Code, Jupiter Notebook, Git, GitHub

PROJECTS

Finance Analysis Dashboard | Power BI · DAX · Power Query · Star Schema | [GitHub](#)

- Developed a 2-page interactive Power BI dashboard analysing ₹137.73M in total sales across 14.94K transactions covering revenue trends, customer segments, and transaction-level risk.
- Engineered a star schema (Transactions fact + Customers & Metrics dims); transformed raw data via Power Query ETL — text cleansing, type safety, and categorical normalization.
- Surfaced 4 key business insights: Retail segment leads at ₹76M revenue; Maharashtra tops states at ₹22M; Loan EMI accounts for ₹40.11M in transactions; ₹14.37M flagged in failed-transaction risk audit.
- Deployed KPI cards, area/donut/bar charts, and a dynamic metric-switcher slicer powered by custom DAX measures.

E-Commerce Sales Analytics — SQL & PostgreSQL | PostgreSQL · CTEs · Window Functions · Data Modelling | [GitHub](#)

- Designed and implemented a normalized 5-table PostgreSQL schema (customers, categories, products, orders, order items) with FK constraints and proper data types across ~1,400 rows.
- Authored 12 production-grade business queries: MoM revenue growth with LAG(), cumulative revenue via SUM() OVER, top 3 products per category using DENSE_RANK() OVER PARTITION BY, and churn detection with 6-month INTERVAL filtering.
- Built customer segmentation logic (CASE WHEN) classifying buyers as One-Time / Repeat / Loyal — revealed ~42% one-time buyers, a targeted re-engagement opportunity.
- Uncovered key revenue drivers: Electronics contributed ~28% of total sales; Mumbai, Bengaluru & Delhi accounted for 40%+ of revenue — insights actionable for regional marketing budget allocation.

Job Market Salary Analytics Dashboard | Excel · XLOOKUP · FILTER · Pivot Table · Power Pivot | [GitHub](#)

- Engineered a fully dynamic Excel dashboard on real-world 2023 job postings — calculation engine powered entirely by chained Excel formulas (no VBA).
- Wired three dropdown filters (Job Title, Country, Employment Type) to drive real-time updates across salary bar charts, choropleth map, and 3 KPI metrics (Median Salary, Top Platform, Job Count).
- Leveraged XLOOKUP, FILTER, SORT, COUNTIFS, MEDIAN+IF, named ranges, and conditional formatting to ensure accurate, readable output.
