SUMMARY

Aspiring Data Analyst (BCA, AI & Data Science) with hands-on experience across the full analytics lifecycle — Python/EDA, PostgreSQL, Power BI (DAX, star schema), and Excel. Skilled at converting raw transactional data into relational models and interactive dashboards that drive HR, finance, and sales decisions.

TECHNICAL SKILLS

Languages & Analysis: Python (Pandas, NumPy, Matplotlib, Seaborn) · SQL

BI & Visualization: Power BI (DAX, Power Query, Star Schema) · Excel (XLOOKUP, FILTER, Power Pivot, Pivot Tables)

Databases & Tools: PostgreSQL · Git & GitHub · VS Code · Jupyter Notebook

KEY PROJECTS

HR Analytics & Employee Attrition Dashboard

- Cleaned and feature-engineered the IBM HR Attrition dataset (1,470 employees, 35 features) in Python/Pandas, then queried PostgreSQL to quantify attrition risk by department, age group, and tenure against a ~16% baseline.
- Built a star-schema Power BI model with DAX measures powering a 3-page dashboard (overview, attrition deep-dive, salary analysis).
- Found overtime employees attrite at 3x the rate of non-overtime staff (30.5% vs 10%) and employees in their first 2 years churn at ~30%, informing HR retention recommendations.

Technologies: Python · Pandas · PostgreSQL · Power BI · DAX · Star Schema

Finance Analysis Dashboard

- Built a multi-page Power BI dashboard analysing ₹137.73M in sales across 14.94K transactions for a finance company, covering revenue, fees, tax, and risk KPIs.
- Transformed raw transaction data via Power Query and modeled it into a relational schema, then authored DAX measures including a dynamic SWITCH-based metric switcher toggling between Sales, Fee, Tax, and Avg Transaction Value.
- Surfaced segment- and state-level insights — Retail led at ₹76M, Maharashtra topped states at ₹22M — and flagged ₹14.37M in failed transactions as a risk area for the business.

Technologies: Power BI · DAX · Power Query · Data Modeling

E-Commerce Sales Analytics (SQL)

- Designed a normalized PostgreSQL schema (customers, categories, products, orders, order items) for a 400-order, 1,000+ line-item Indian e-commerce dataset.
- Wrote 12 analytical queries using CTEs, window functions (LAG, DENSE_RANK, SUM OVER), and subqueries to compute MoM revenue growth, top products per category, and customer lifetime value.
- Built CASE-based customer segmentation (one-time / repeat / loyal) and churn detection, finding Electronics drove ~28% of revenue and 42% of buyers were one-time — a targeted re-engagement opportunity.

Technologies: PostgreSQL · SQL · CTEs · Window Functions

Data Jobs Salary Analysis Dashboard

- Built a fully dynamic Excel dashboard analyzing real-world data-domain job postings — no VBA, calculation engine powered entirely by chained formulas.
- Wired dropdown filters (Job Title, Country, Employment Type) using XLOOKUP, FILTER, and Power Pivot to drive real-time salary charts and KPIs.

Technologies: Excel · XLOOKUP · FILTER · Power Pivot · Pivot Tables

EDUCATION

BCA — Artificial Intelligence & Data Science

2024 – 2027

SAGE University, Bhopal | CGPA: 7.79

CERTIFICATIONS

- HackerRank SQL (Advanced) — Credential ID: 0D1C8D1C01A4
- Power BI for Data Analysts — Microsoft (LinkedIn Learning)
- Oracle Agentic AI Professional Foundations Associate — Oracle
